Sneha Baid

Product Designer
Bengaluru, Karnataka, India | snehabaid.1998@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Product Designer with experience designing complex workflows, dashboards, and service systems across enterprise and operational contexts. Skilled in Figma, design systems and tokens, information architecture, interaction design, prototyping, and mixed-methods research, with experience simplifying processes for non-design stakeholders. Brings a systems-oriented approach to building clear, connected product experiences from discovery through delivery.

EXPERIENCE

Bengaluru Tech Week 2026 **2026 - Present**
Product Designer (Freelance) *Bengaluru, India*

- Design a five-role product system for a real city tech event, mapping attendee, host, participant, and volunteer journeys and prototyping the complete experience end to end in Figma.
- Maintain one token set across five linked apps rather than designing five separate products, allowing component changes to propagate across the system without visual drift.
- Work backward from the operational constraint that determines whether the event works: where people bunch up and when, simplifying complex workflows around those moments.

The Design Daftar **Jun 2026 - Jul 2026**
Brand Operations Executive *Bengaluru, India*

- Owned brand operations and ran design hiring end to end in eight weeks, writing role definitions at two levels and building a sourcing strategy across six channels.

Birmingham City University **Nov 2024 - Dec 2025**
Resourcing Advisor, People Operations Consultant *United Kingdom*

- Redesigned cross-border hiring into a single end-to-end service blueprint covering 50+ international hires, which cut process handoff failures by 75%.
- Ran an AI-driven audit of the Oracle recruiting system, stripping 30% of the redundancy out of the workflow and lifting candidate NPS by 40%.
- Presented design rationale to Leadership, Legal, HR, and Compliance, none of them designers, all of them daily users of the process being changed.

ManpowerGroup **Oct 2023 - Nov 2024**
Service Delivery Consultant *Birmingham, UK*

- Redesigned sourcing and engagement workflows inside Bullhorn and HireVue, two enterprise systems nobody chooses to use, producing 45% more qualified placements in six months and a 20% faster time to shortlist.
- Mapped 400 touchpoints across two client accounts, found where candidates were dropping out, and redesigned those points with account stakeholders. Ghosting fell 50%.
- Automated absence-monitoring with Zapier AI Agents, giving each recruiting team back several hours a week.

Diamond Centre Wales **May 2023 - Oct 2023**
User Research Associate *Birmingham, UK*

- Ran a full mixed-methods study, 50+ interviews plus quantitative work, for a luxury manufacturing brand deciding whether to adopt a new production technology.
- Delivered the findings straight to a senior stakeholder team, framed around the decision they had to make rather than around the research itself.

CBRC Architects, SNN Builders, ID+AS **2020 - 2022**
Architect and Spatial Designer *Bengaluru, India*

- Two years designing circulation and flow through buildings, where the constraints you cannot see, structure and load-bearing walls, decide the experience of everyone inside. Same instinct, different medium.

Skills

- **Design**: Figma end to end, design systems and tokens, information architecture, interaction design, prototyping
- **Research**: Mixed methods, user interviews, usability testing, journey mapping, service blueprinting, Maze, Otter.ai
- **Data and reporting**: Dashboard design, data storytelling, advanced Excel, executive-facing reporting
- **Build and automation**: Claude Design, Zapier AI Agents, Adobe Creative Suite

Achievements

- **Rashtrapati Award:** The highest award given by the President of India to Bharat Scouts and Guides.
- **Yuva Ratna Next Award:** National award for Best Mural feature.

Languages

- English
- Hindi
- Kannada
- Marwadi

PROJECTS

Unsolicited founder pitch, 0 to 1 **2026**
Wispr Flow Concepts
- Built four new directions for Wispr Flow's speech-understanding engine as working interactive prototypes in Claude Design, then sent them to the founders unasked.
- With no existing product surface to reference, defined the interface direction and explained the design decisions before developing the concepts.

Self-directed concept **2026**
Rise Connect
- Mapped four stakeholder groups, students, mentors, writing coaches, and parents, into one information architecture that supported different views of the same coordination problem.
- Sketched the concept in three days from inside the organization, using direct visibility into the real workflow rather than relying only on the documented one.

Team project, MSc UX Design **2023**
MUM.me
- A mental health app for pregnant women, taken from market research through to usability testing with a project team.
- Research-first by necessity: the users could not be guessed at, so every interface decision had to trace back to something someone actually said.

Personal concept **2026**
Urban Eden
- AI-assisted balcony gardening: spatial scanning turned into a four-tab design system with a commerce and content structure sitting on top of it.

EDUCATION

Birmingham City University, UK **2023**
MSc, User Experience Design *UK*
- **Coursework:** Human-centered design, visual design, UX development, assistive technologies

PES University, Bengaluru, India **2021**
Bachelor of Architecture, Architecture *Bengaluru, India*
- **Coursework:** Design thinking, critical analysis, spatial and interior design

HOW I WORK

I came to product design from architecture, then spent three years inside operations. Both taught me the same thing: watch how people actually move through a system, find where it jams, then redesign the path instead of decorating it.
Most of my work has been on internal tools and regulated workflows, the kind of software people have no choice but to use. That is a good place to learn, because nothing forgives you.

SELECTED NUMBERS

75% fewer handoff failures, cross-border hiring blueprint
40% lift in candidate NPS from an AI-driven system audit
45% more qualified placements in six months
50% drop in candidate ghosting after remapping 400 touchpoints
50+ mixed-methods interviews across two research studies
